On snom phones "Hot Desking" allows sharing one and the same hardphone by many users.

* logging off existing user accounts and logging on new user accounts

following processes must be taken, first need to remove all identity values

Unregistration all active SIP accounts
Deletion of SIP identity related parameters
Login Wizard: -> Account? -> Registrar?

Setup -> Identity X -> Login Tab -> Login Information -> Remove all identities

http://www.a-enterprise.ch/images/fbfiles/images/snom_identity.jpg

using the Web-UI: Identity X -> Login: "Remove All Identities"
using the Phone: Setup -> Function Keys -> Number: F_LOGOFF_ALL

http://www.a-enterprise.ch/images/fbfiles/images/snom_key_event_logoff.jpg

By pressing the pre-programmed "snom" function key, the following screen is shown:

http://www.a-enterprise.ch/images/fbfiles/images/snom_logoff_all_users.jpg

Registration of new account, Optional: Authentication -> Password Prompt

http://www.a-enterprise.ch/images/fbfiles/images/snom_welcome_logon.jpg

Press a key and enter the new extension to log on, e.g. 484

http://www.a-enterprise.ch/images/fbfiles/images/snom_account_logon.jpg

Confirm with OK and enter the registrar of the new extension to log on

Hint!

if configure an Intranet DNS for example the pbx naming sip.localdomain, so it's keep easy and didn't need to enter an registrar, this will appended from DHCP and being already in the field
